

EMPIRE

RESCUE DESCENT KIT

REKORX1

The Empire is an evacuation and rescue unit designed to rescue/ recover a person at height by descending. The controlled descent device is simple to use and gives a basic rescue system to situations where the victim is reasonably accessible. It can also be used for an effective temporary static line with an integral self rescue ability. Should a fall occur, the rescuer can release the device and control the release of extra rope, allowing the attached victim to slowly lower to the ground.
